ABOUT ME

Game Designer with professional experience in gameplay systems, level design, and progression balancing, I bridge the gap between creative vision and technical implementation. With proven **experience in Unity (C# & C++) and Unreal Engine**, I have led player experiences through iterative design, structured playtesting, and close collaboration with multidisciplinary teams. Experienced in translating design ideas into clear documentation and refining gameplay based on player feedback and project goals. Always eager to learn, experiment, and create meaningful experiences that players enjoy. Focused on player-centered design, engagement, retention, and the fine-tuning of gameplay feel to deliver memorable experiences.

EXPERIENCE

Denshattack! - Undercoders

2025 - 2026

<https://store.steampowered.com/app/2524850/Denshattack>

- Balanced the game's progression and economy across **67 handcrafted levels**, ensuring a rewarding unlock pace through iterative tuning in Excel and Google Sheets.
- Authored **6 comprehensive Game Design Documents** to communicate gameplay systems, progression logic and implementation requirements across multidisciplinary teams.
- Designed and refined gameplay features** by collaborating closely with designers, programmers and QA, aligning player experience with project goals.
- Validated level flow, progression pacing and gameplay balance** through structured internal playtesting, translating feedback into actionable design improvements.
- Contributed to the **definition of gameplay systems within Unreal Engine while maintaining clear documentation in Confluence** to support cross-team collaboration.
- Developed **balancing spreadsheets to model progression**, unlock pacing and gameplay economy, supporting iterative design decisions.

PERSONAL PROJECTS

Lyra - LaMapachanda

2025 - 2026

<https://la-mapachanda-studio.itch.io/lyra>

As a **Game and Level Designer** for Lyra, a **3D wholesome puzzle-adventure** built on **Unreal Engine**, I **designed and documented every gameplay mechanic through a Pattern-Based Dictionary with EDPV** learning curves. Using a player-centered approach and rational level design, I shaped **three thematic levels** balancing difficulty progression and emotional pacing. I built a **data-driven validation pipeline** with C++ telemetry and Python visualizations to iterate on guidance and puzzle balance based on real player behavior.

Tumble Up - Txispa's Studio

2024 - 2025

<https://franky-style.itch.io/tumble-up>

As a **Producer and Game Designer**, I worked on Tumble Up, a 3D unity **Party Game** based on minigames made in **Unity C#**. As a designer my scope was to **design 4 minigames and 8 different maps, seeking for a fun gameplay** that would reach the expected audience and would keep them engaged on **loops of 2 to 7 minigames**. My secondary role was to work as a **SCRUM master** and take all the organization of the project, such as excels and daily meetings.

Chrono Fish - Olympia Interactive

2023 - 2024

<https://franky-style.itch.io/chrono-fish>

As a **Game and Level Designer** I worked on Chrono Fish, a 2D topdown **Roguelike** in **Unity C#**. For this project I managed to **design coherent metrics for level design** in order to implement procedural maps on the game. Also, throughout the development I was working on **parry mechanics and shooting events timing and balancing** in order to maximize gameplay feel and retention.

EDUCATION

Bachelor's Degree in Video Game and Applied Games Design and Development

ENTI - UB (School of New Interactive Technologies)
Barcelona 2022 - 2026

LANGUAGES

• English (Advanced) • Español (Mother tongue) • Catalan (Mother tongue)

KEYWORDS

Unreal engine
Gameplay Design
Engagement and retention
Economy Design
Progression Design
Player-centered design
System & economy balancing
